

Activity Worksheet - Heuristic Showdown: Human vs AI

Topic: T01 - GUI & Usability Testing

Duration: 20 minutes

Team size: 3-4 students

Materials: This worksheet and the embedded EShop screenshots

Internet after distribution: Not required

Activity owner/facilitator: 23127149 - Nguyễn Bình An

Answer-key reviewer: 23127327 - Lưu Ngô Quốc Bảo

Learning goal

By the end of the activity, your team should be able to separate:

1. A visible observation.
2. A plausible usability hypothesis.
3. A verified defect.

The activity uses Nielsen's heuristics and a 0-4 severity scale:

Rating	Meaning
0	Not a usability problem
1	Cosmetic
2	Minor
3	Major
4	Usability catastrophe / task blocker

Part A - Human review (7 minutes)

Inspect the two EShop screenshots.

Tổng tiền thanh toán (VND):

45000000

Thoát

Thanh toán thành công!

Cảm ơn bạn đã mua sắm tại EShop.

[Quay lại trang chủ](#)

Success screen

Write at least five candidate findings. Use only what is visible. If more evidence is needed, say so.

No.	Visible observation	Possible heuristic	Tentative severity	Evidence still needed
1				
2				
3				
4				
5				

Part B - Audit the AI draft (7 minutes)

For each AI statement, select **Verified from screenshot**, **Rejected**, or **Needs more evidence**. Explain briefly.

ID	AI-generated statement	Your verdict	Reason
AI-1	The success page gives a clear completion message in a prominent position.		
AI-2	The coupon input is impossible to operate with a keyboard.		
AI-3	The success page does not show an order identifier or order summary.		
AI-4	The green confirmation button fails WCAG AA contrast.		
AI-5	The coupon state communicates the applied code, saved amount, and updated total.		
AI-6	Mobile Safari hides the payment button behind the virtual keyboard.		
AI-7	The underlined currency symbol proves that the total is a clickable link.		
AI-8	The screenshots alone cannot prove whether the full checkout has an address-confirmation step.		

Part C - Final defect decision (4 minutes)

Choose one candidate from Part A and complete the decision gate:

Field	Team answer
Candidate issue	
What is directly visible?	
What is still an assumption?	
Verification step	
Final status: verified / rejected / needs evidence	
Final severity and rationale	

Part D - One-minute share-out (2 minutes)

Complete this sentence:

Evidence changed our verdict on _____ because _____.

Facilitator answer key

The key rewards evidence quality, not matching one exact wording.

Part A - Acceptable candidate observations

Examples include:

- The success state is prominent and clearly worded.
- The success screen does not visibly include an order ID, order summary, or receipt link.
- “Quay lại trang chủ” is the only visible next action after success.
- The coupon state shows the applied code, savings, and updated total near the action.
- The amount text and currency symbol have inconsistent underline styling in the captured screen.
- The screenshot crop does not reveal the entire checkout, so absence of an address step cannot be proven from this image alone.

Do not award a verified-defect verdict for hover, focus, keyboard, responsive, contrast-ratio, or screen-reader claims without the required interaction or measurement.

Part B - Suggested verdicts

ID	Suggested verdict	Rationale
AI-1	Verified from screenshot	The success heading is large, centered, and visually prominent. This verifies visibility, not user comprehension.
AI-2	Needs more evidence	Keyboard operation cannot be established from a static screenshot. Test tab order, focus, typing, and activation.
AI-3	Verified from screenshot, with scope note	No order ID or summary is visible in the captured success state. Whether it is required is a product decision; severity needs task/context evidence.
AI-4	Needs more evidence	A contrast ratio must be measured from actual foreground/background colors.
AI-5	Verified from screenshot	The applied code, saved amount, and new amount are visible. Usability quality still needs participant evidence.
AI-6	Needs more evidence	Requires a real Mobile Safari session and virtual keyboard interaction.
AI-7	Rejected	Underlining may be styling or browser rendering; clickability requires interaction/DOM evidence. “Proves” is unjustified.

ID	Suggested verdict	Rationale
AI-8	Verified	The screenshots are partial states and cannot prove the presence or absence of another step in the flow.

Scoring rubric (10 points)

Criterion	Points
At least five specific observations	2
Correct heuristic mapping with reasonable rationale	2
AI audit distinguishes visible facts from interaction/measurement claims	3
Final defect decision includes a concrete verification step	2
Share-out explains how evidence changed the verdict	1
